

periApp™

periApp provides operational and clinical support to your clinical team. With its intuitive interface, periApp collects quality and clinical data related to your cases as well as provides operational support to help your department function more efficiently.

QUALITY CONTROL

Quality management tools are central to your ongoing success. periApp helps provide a high level of service to each patient by allowing users to:

- Configure checklists by protocol
- Maintain comprehensive patient demographics
- Manage adverse events
- Track key performance indicators
- Manage discharge process

RESOURCE MANAGEMENT

Personnel, equipment, disposables, and supplies are all key parts of delivering safe and effective patient care. Having the right resources at the right place and time is key to delivering cost-effective patient care. periApp tools help manage all:

- Personnel scheduling
- Disposables procurement
- Capital equipment tracking
- Inventory levels and expiration dates
- Linking resources to each surgical case
- Billing data for each case
- Cost per case auditing

COMPLIANCE MANAGEMENT

Regulatory compliance and inspections are a large part of any health care organization. To manage adherence to accepted standards, periApp provides tools to:

- Track compliance to defined policies and procedures
- Track total history of device usage to the patient level
- Track disposables used in each case
- Ensure accurate billing of services

CASE MANAGEMENT

The core module of the application, case management, maintains patient demographic and clinical information related to each surgical case. Pre-operative testing, allergies, and medications can be captured and tracked. Performance indicators are prominently displayed and required for each case to promote compliance with accepted standards.

SCHEDULES

The schedule module permits the hospital to request services based on date and time. All requests are then assigned to the appropriate clinician. The clinical personnel can view and print their schedules with changes and add-ons communicated immediately via email. Then the hospital receives confirmation from coverage personnel.

SUPPLIES

The inventory management module tracks disposables from requisition to usage. Tracking is available to the serial number level. Par levels can be utilized to manage the reordering process. periApp also can be integrated with external purchasing systems to generate purchase orders. Receipt of arriving shipments updates inventory levels.

periApp encourages inventory management through assignment of items to specific cases, allowance for adjustments to inventory to account for loss, breakage, and expiration or recall. Beginning and ending inventory reports permit usage analysis.

PERSONNEL MANAGEMENT

periApp tracks the clinicians' time spent on a case and prepares productivity reports. Knowing the length of cases is essential to planning. The time management functions in periApp allow reporting based on criteria such as procedure type, demographics or surgeon performing the procedure. All clinical staff can be captured on each case.

INVOICES

At the conclusion of a case, periApp allows the clinician to generate a list of charges incurred on the case. The resulting bill covers charges for all services performed. This data can be exported to an external financial system for invoice creation.

COMPREHENSIVE REPORTING

Built on standard reporting and analysis technology, periApp provides a wealth of reports on staff productivity, inventory and supply usage, case management and quality indicators. If new reports are needed, they can be created and added to the system. Each report generated can be benchmarked against over 30,000 records.

PROFESSIONAL SERVICES

Every hospital is unique in its operations and in the data that it keeps. periApp was built with flexibility in mind. Beyond the standard data available to all users of periApp, site-specific fields can be created to capture the information most important to your operations.

In order to get the greatest benefits from periApp, installation, configuration and training services are highly recommended. Our experts can help assess the business processes, information requirements and external systems to develop an implementation plan that grows with your needs.
